Level of consciousness

Core Nursing Essentials Core Clinical Concepts

Compare responsiveness, orientation and behaviour with the patient's baseline. A new alteration may reflect hypoxia, hypoglycaemia, medicines, infection or neurological injury.

For educational purposes only.

Introduction & key concepts

Compare responsiveness, orientation and behaviour with the patient's baseline. A new alteration may reflect hypoxia, hypoglycaemia, medicines, infection or neurological injury.

Nursing responsibilities

- Check identity, consent, the relevant observations and the purpose of the assessment.
- Record the finding, context and response using the approved clinical record.
- Escalate uncertainty or deterioration to the responsible professional; do not use a study note as a standing treatment order.

Clinical example & examination focus

In a viva, explain level of consciousness in your own words, identify the observations needed and state a limitation. Compare the finding with the patient's baseline rather than assuming one number or label gives a diagnosis.

Quick Revision

Compare responsiveness, orientation and behaviour with the patient's baseline. A new alteration may reflect hypoxia, hypoglycaemia, medicines, infection or neurological injury.

Frequently asked question

Can this summary replace practical training?

No. Use your prescribed learning material and the institution's current protocol with qualified supervision.
